Retirement Forecast - Pat and Chris

FGA | Valuation date 2026-11-03

Funding ratio	**84%**	Surplus / (shortfall)	**-$513K**
Savings last through	**Age 114 (2082)**	Peak resources	**$10.78M (2066)**
Retirement	**Age 60 (2029)**	Social Security	**Age 67**

Resources vs. lifetime spending need

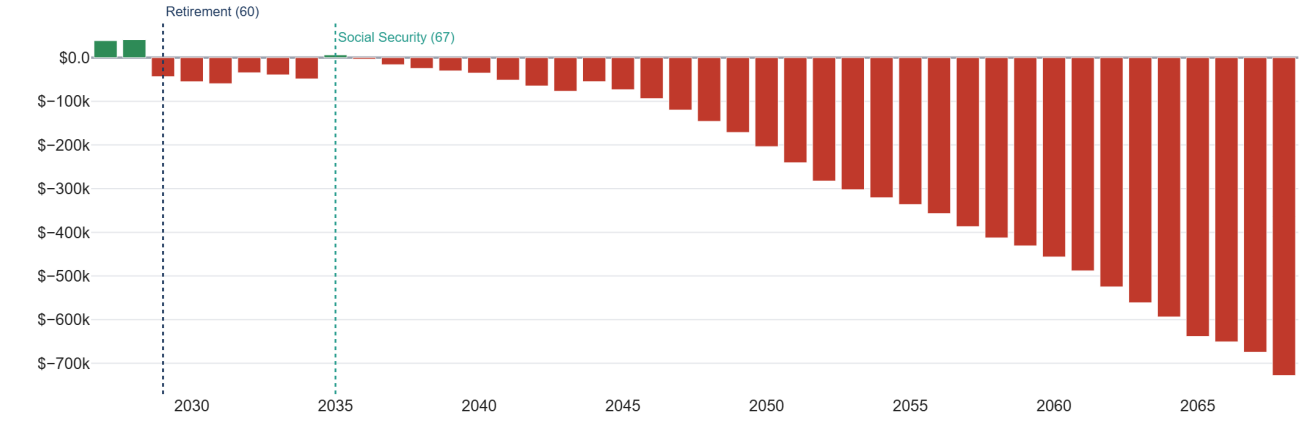

Resources include savings plus the present value of Social Security and future earnings

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

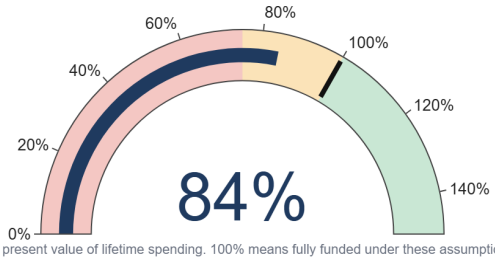

Net cash flow by year

Income after tax minus spending. Green years add to savings; red years draw on savings

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

Funding ratio

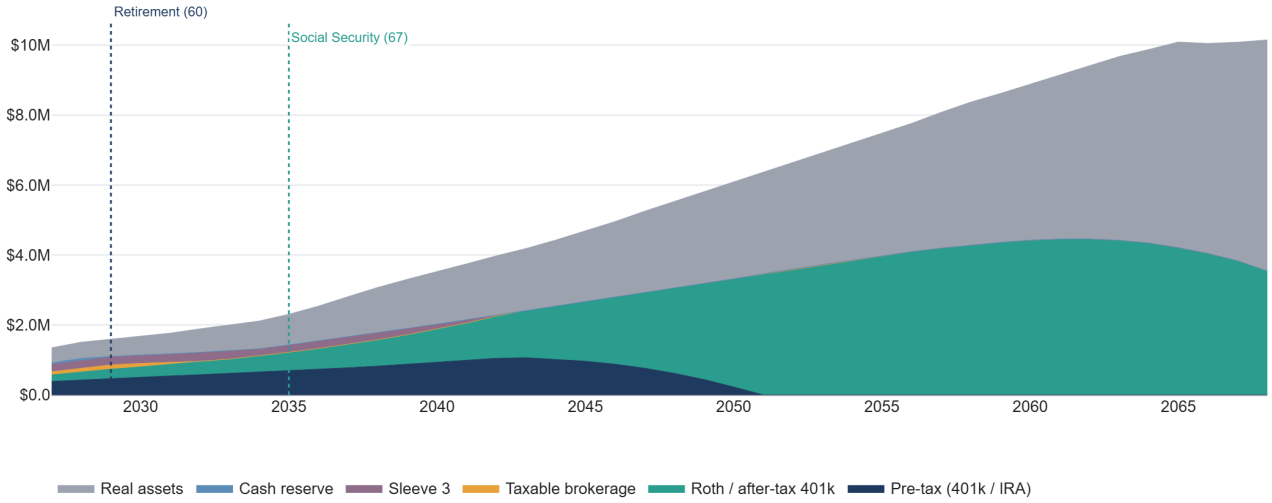

Present value of resources divided by present value of lifetime spending. 100% means fully funded under these assumptions; it is not a probability of success.

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

Where your savings sit over time

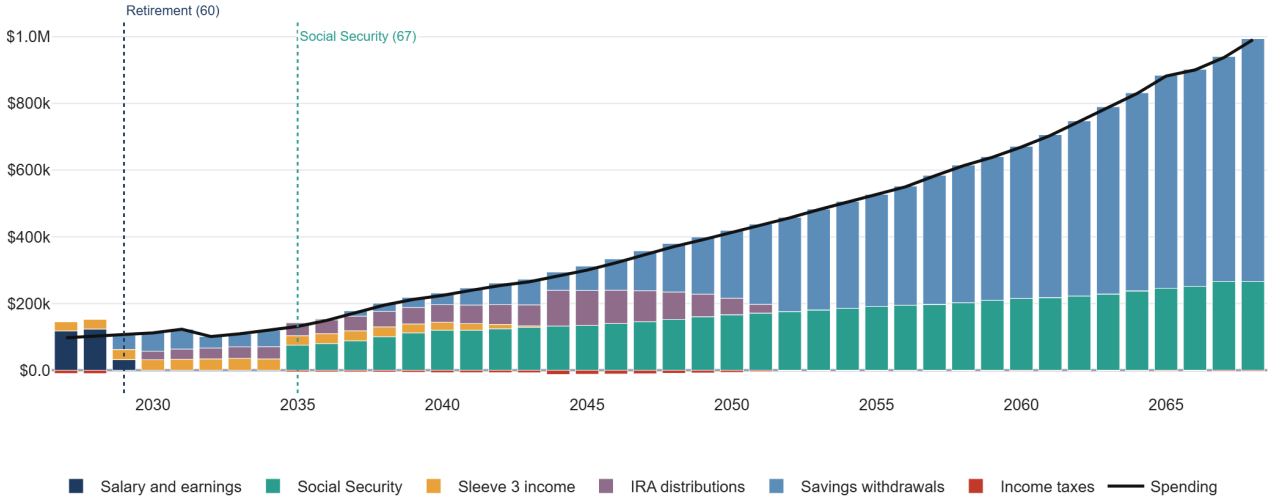

Projected year-end account balances

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

Where your income comes from

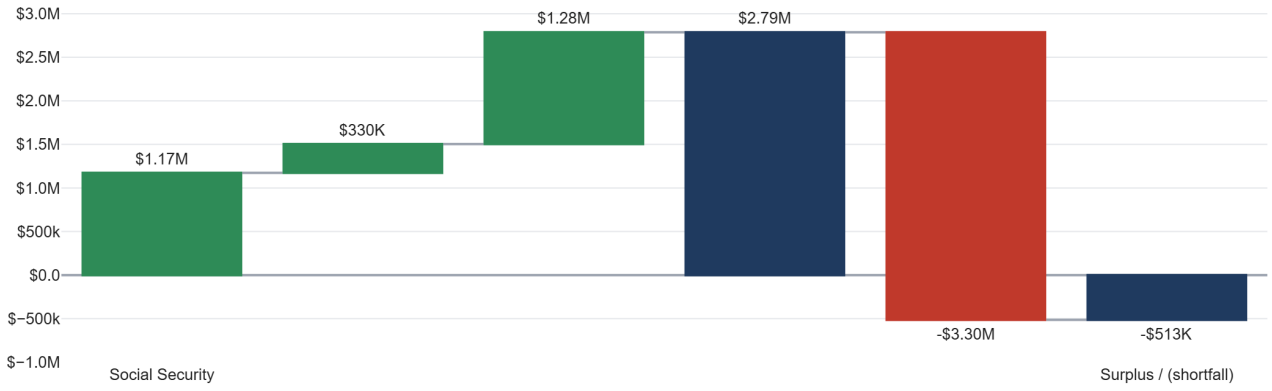

Annual income by source, estimated federal tax, and spending

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

Funding bridge (present values)

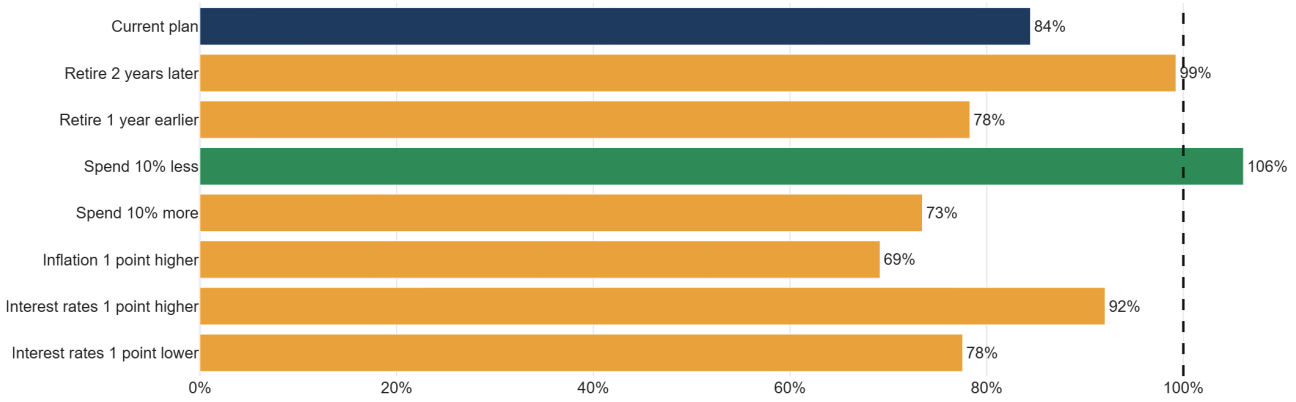

Today's value of everything available vs. everything planned

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

How the plan responds to different assumptions

Funding ratio; 100% = fully funded

Hypothetical illustration based on stated assumptions; not a guarantee of future results.

Key assumptions

Valuation date	2026-11-03

Social Security start	age 67; estimated benefit $36,600 per year in today's dollars
Household	Two people
Planned spending today	$60,000 per year, plus mortgage payments
Inflation assumption	CPI70/COLA70 plus 2.5%
Return on long-term assets	12.5%
Return on 401(k) / cash	3.5%
Sleeve 3 income / growth	14.0% / 4.0%
Discounting	legacy_treasury; employment spread 1.5%
Mortality table	RP-2014
Taxes	Estimated federal income tax; standard deduction; brackets indexed to Social Security COLA

Important information

• This report is a hypothetical illustration prepared from the assumptions shown. It is not a guarantee, prediction or promise of future results, and actual results will differ.

• The funding ratio compares the present value of projected resources with the present value of projected lifetime spending, weighted by the probability that you are alive in each year. It is not a probability of success.

• Year-by-year charts are shown in future (nominal) dollars and assume both people are alive in every year shown.

• Investment returns, inflation, interest rates, tax law, Social Security rules and life expectancy may differ from the assumptions. Taxes shown are estimated federal income taxes only; state and local taxes are not modeled.

• Social Security benefits are based on the benefit estimate you provided and are not adjusted by this report.

• Mortality assumptions use published actuarial tables, not your personal health. This report is not tax, legal or investment advice. Please review the assumptions with your adviser before relying on any figure.
